Replacement Screens - Just When You Need Them

Are you responsible for maximizing the run time of the screening and sifting machines in your plant? If you are, you know how important it is to maintain the wire cloth screens in your equipment.

Whether you're screening paint, flour, ink toner, salt, rocks, spices, sand and gravel, recycled material, or anything else, you want the highest rate of throughput and the shortest amount of downtime. Because when your machines are down or you're waiting for a replacement screen, you're losing money.

That's why you want a company with one of the largest and most complete inventories of wire cloth on hand, including all meshes, alloys, and wire diameters. A company that can turn around many orders within a few days. One that works hard to get you what you need as quickly as possible, so you can get back to work.

Here's how Compass Wire can support your screening and sifting operations:

Increase the amount of material screened over time.

When you invest in high quality wire cloth, you'll get more consistent throughput. That means material passes through the screen without blinding or clogging, and separates into different components efficiently and exactly. You'll screen more material and avoid costly downtime.

Extend the screen life of your current equipment.

When material passes more easily through a screen, the need for mechanical cleaning is reduced or eliminated, and screens last longer. Compass Wire can help you select the correct wire mesh spec based on particle size and material.

Decrease machine downtime.

Despite your best efforts at improving efficiency and extending the life of your screens, there comes a time when screens must be replaced. Every minute you wait for replacement screens is lost production time. And lost revenue for your company.

That's why Compass Wire keeps so much inventory on the shelf. When you place an order, we turn it around quickly, preventing costly downtime and getting you back up and running.

THE SCREENING PROFESSIONALS

Vibratory hook screens

Vibrating replacement screens - based on your specifications - are available for ALL original manufacturers equipment, and arrive at your plant ready for installation.

Available in both standard and custom sizes, our replacement screens offer maximum surface tension, giving you efficient performance and long life.

Fabricated Edge Screens

When you need screens with specialty edges – think flour milling, high temperature applications, or where sanitation is a high priority– Compass Wire offers the following types of edging construction:

Bonded edges made of natural cotton webbing with hot melt adhesive and developed specifically for food grade applications.

This economical edge preparation allows operating temperatures up to 300 degrees F, and is heat sealed for maximum screen edge life.

High-temperature edges are specially formulated for processing materials at temperatures up to 600 degrees F.

Polyester edges permanently adhere to both polyester and nylon woven wire cloth, forming edges that are an integral part of the screen without the need for sewing.

Vinyl edges process materials when sanitary conditions are crucial. We offer washable, FDA-approved, and bacteria-proof screens.

Metal edges, used for heavier applications like scalping or ball support, are available in mild steel, stainless steel and galvanized steel alloys.

THE SCREENING PROFESSIONALS

Round and pre-tensioned screens

Pre-tensioned screens for your original manufacturers equipment offer even and efficient tensioning of both metal and synthetic wire cloth. Used to separate solids from liquids or segregate dry material into various sizes, these screens are fabricated to ensure maximum screen life through efficient product performance. These screens can be epoxied or welded; epoxy approved for FDA applications is available.

- ◆ TEA (Thermal Engineering)

Ultrasonic screens

Ultrasonic screens create a secondary, ultrasonic vibration that prevents blinding on fine meshes.

We can retrofit screens of any size and design with ultrasonics, and the technology is suitable for use in all vibratory screening applications.

- ◆ Significantly improved screening performance
- ◆ Consistent throughput and particle size distribution
- ◆ Smaller mesh sizes offer equivalent of higher throughput
- ◆ Higher capacity utilization and improved separation effect
- ◆ Eliminates the need for mechanical cleaning while increasing the life of the screen fabric

We carry a full line of replacement parts.

We supply parts for all OEM screeners. Pictured is some of our inventory.

THE SCREENING PROFESSIONALS

We are what our customers need us to be.

We are agile.

We can change gears at a moment's notice to satisfy our customers' changing needs, or a new customer's requirements.

We are quality-focused.

We strictly adhere to the standards of our ISO 9001-2008 quality program, ensuring your order is right... every time.

We are committed to customer satisfaction.

All of us – every department and every employee – do what it takes to get the job done. We are not satisfied until you are satisfied.
